
Operating Room Added

Somerset Hospital has developed an additional operating room to accommodate an expanded surgical schedule. The hospital now has a total of five operating rooms along with a double room endoscopy suite. A total of \$100,000 was invested in the new operating room including a new autoclave used for sterilizing surgical equipment. The new room is located in the present operating suite and was originally developed in a previous building project but left unoccupied for future use. At present, 33 members of the Somerset Hospital Medical Staff are utilizing the operating suite for an estimated total of 5,329 procedures per year. Shown in the photo of the new operating room is, from left, Director of Surgical Services Bob King and Larry Patton, Surgical Services Inventory Equipment Coordinator.
